

Clinic Intake Check list

Use this one-page reference during room setup and patient intake review.

A faithful conversion should preserve title formatting, dot bullets, numbered steps, table structure, and the figure caption.

Supplies

- .. Confirm patient identity.
- .. Prepare the sterile tray.
- .. Label the specimen bag.

Procedure

3. Document the intake summary.
1. Wash hands before gloves.
2. Put on sterile gloves.

The step order matters because hand cleaning must happen before sterile contact and the documentation step comes last.

Reference Figure and Status Table

Figure 1. The red square sits next to Step 3.

The figure is a position cue only, but the caption still needs to point to the correct numbered step.

Status table

Tray ready - Nurse - Done
Bag labeled - Assistant - Pending
Consent filed - Admin - Done

The original table structure is flattened into plain lines here.
