

Clinic Intake Checklist

Use this one-page reference during room setup and patient intake review.

A faithful conversion should preserve title formatting, dot bullets, numbered steps, table structure, and the figure caption.

Supplies

- Confirm patient identity.
- Prepare the sterile tray.
- Label the specimen bag.

Procedure

1. Wash hands before gloves.
2. Put on sterile gloves.
3. Document the intake summary.

The step order matters because hand cleaning must happen before sterile contact and the documentation step comes la

Reference Figure and Status Table

Figure 1. The red square sits next to Step 2.

The figure is a position cue only, but the caption still needs to point to the correct numbered step.

Status table

Item	Owner	Status
Tray ready	Nurse	Done
Bag labeled	Assistant	Pending
Consent filed	Admin	Done

The table should stay tabular so rows and columns remain unambiguous after conversion.
